

Carriage Roller

Carriage Rollers - Carriage rollers are specifically designed bearings that are used on lift masts to be able to help them perform within difficult environmental surroundings. Lift masts are frequently subjected to oscillations, shocks, high dynamic and vibrations and static loads. This apparatus is regularly exposed to environmental influences such as heat, dust, cold, aggressive ambient air, moisture and contamination. Thus, the guidance arrangements of lift masts should be particularly tough and have a certain high load carrying capacity.

Carriage rollers have been developed as the solution for operating in different environmental conditions. These bearings are the answer where the guidance arrangements of the lift masts need to be cost-effective and maintain operational security while having the ability to deal with a specifically high load carrying capacity.
